Cash Transaction vs PPA Transaction

Cash = simple

- Two parties
- EPC agreement, maybe O&M and a PeGu

$\mathbf{PPA} = \operatorname{complex}$

- Third-party owned financing
- Looks like a straightforward bilateral negotiation between SPWR and Customer, but the empty chair of the financier changes everything
- Sales team simultaneously selling two products: PV and a financial contract
- An overly Customer-friendly PPA will not be financeable, but an overly Prover-friendly PPA may not meet Customer requirements
- Requires significant deal execution skill and attention to detail
