### To Escape Lockdown, Don't Be Creepy With Health Data

By Alex Webb | Bloomberg

May 6, 2020 at 9:04 a.m. CDT

The most important trait of any Covid-19 contact-tracing app is that people actually use it. Without widespread adoption, we may all be locked down for a lot longer.

Just how widespread? In the U.K., at least 86% of smartphone users, covering 56% of the total population, will need to use the app to be effective in tracing contacts with those infected to control the novel coronavirus's spread, according to an April report led by Oxford University's Nuffield Department of Medicine. Winning popular trust has to be the priority.

Unfortunately, Britain's National Health Service seems to have gotten off on the wrong foot with the solution it started trialing on the Isle of Wight, off England's southern coast, on Tuesday. The app has caused concern about the centralized collection of information. Even though it's anonymized, and less specific than the location data that many happily share with Google Maps or running apps such as Strava (the NHS app just asks you to identify your

DEC. 6, 2019 at 6:00 a.m. CST

Most people know it is dangerous, and all but two states consider it illegal. But many motorists still drive while texting, contributing to crashes that kill more than 3,000 a year in the United States.

Now, a Maryland suburb sometimes derided as a "nanny state" is debating a controversial new program that would let authorities catch such drivers in the act.

## CREEPY IN CONCEPT

“**CREEPY**” IS:

1. SCARY
2. BUT I DON'T KNOW.

4

# THE UNCANNY VALLEY

## • Prof. Masahiro Mori

- I have noticed that, in climbing toward the goal of making robots appear human, our affinity for them increases until we come to a valley, which I call the *uncanny valley*.
- Since I was a child, I have never liked looking at wax figures. They looked somewhat creepy to me. At that time, electronic prosthetic hands were being developed, and they triggered in me the same kind of sensation. These experiences had made me start thinking about robots in general, which led me to write that essay. The uncanny valley was my intuition. It was one of my ideas.
