5

Energy Reliance

- ▶ “The threat of more devastating malevolent attacks such as EMPs [electromagnetic pulses] underscores the vulnerabilities associated with the growing reliance of our society on electricity, starting with the “internet of things” where an estimated **50 billion devices or more are connected to an internet** that relies on electricity.
- ▶ “All of our critical infrastructures – finance, telecommunications, health care, industry, energy, indeed the systems we need to respond to energy emergencies – are **connected to and often managed via the internet** and they all rely on electricity.”
- ▶ Secretary Ernest Moniz
