Statutory Employment Laws: Private v. Public

“Women, on average, have more:

- Openness directed towards **feelings and aesthetics rather than ideas**. Women generally also have a **stronger interest in people rather than things**, relative to men (also interpreted as empathizing vs. systemizing).
- These two differences in part explain why **women relatively prefer jobs in social or artistic areas**. More men may like coding because it requires systemizing and even within SWEs, comparatively more women work on front end, which deals with both people and aesthetics.
- Extraversion expressed as **gregariousness rather than assertiveness**. Also, **higher agreeableness**.
- This leads to women generally having a **harder time negotiating salary, asking for raises, speaking up, and leading**. Note that these are just average differences and there's overlap between men and women, but this is seen solely as a women's issue. This leads to exclusory programs like Stretch and swaths of **men without support**.
- **Neuroticism (higher anxiety, lower stress tolerance)**. This may contribute to the higher levels of anxiety women report on Googlegeist and to the lower number of women in high stress jobs.”
