  - Appendix B: 2016 Section 101 Update

- **U.S. Patent No. 5,970,479:**  
computerized trading platform for reducing settlement risk by having third party ensure exchanges are completed by both or neither party.
- **Holding:** “[T]he claims at issue are drawn to the abstract idea of intermediated settlement . . . . [M]erely requiring generic computer implementation fails to transform that abstract idea into a patent-eligible invention.”

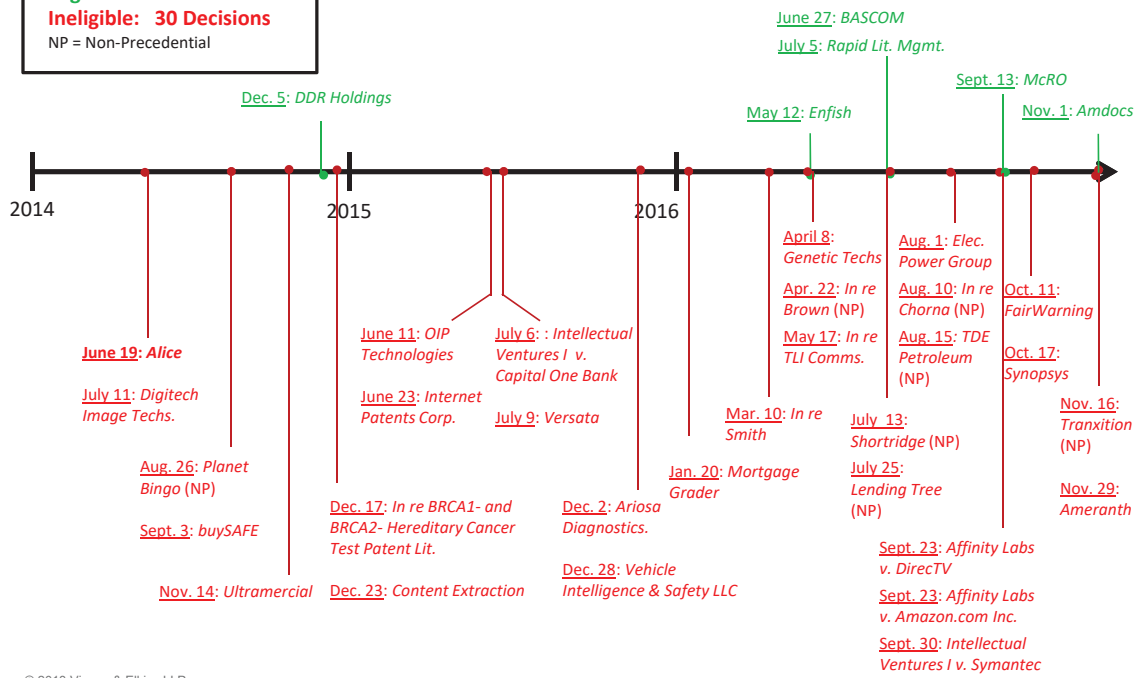

- **Step One** – Are the claims “directed to” one of the patent-ineligible “concepts” like “laws of nature, natural phenomena, and abstract ideas.”
- **Step Two** – “Simply appending conventional steps, specified at a high level of generality” is not “enough” to supply an inventive concept. “[C]laims in *Diehr* were patent eligible because they improved an existing technological process, not because they were implemented on a computer.”
