

## Methods for Hedging that Reduced Market Exposure to the Uri Storm Conditions for both Gas and Power

Presented at the 2021 Gas & Power Institute  
Houston, Texas  
October 14, 2021

Jim Pappenfus

## Special Thanks

**This presentation would not have been possible without the mentoring and input of Craig Enochs. Thank you!**

## Roadmap – Winter Storm Uri Impacts on:

- **Power**
  - Generator / PPA Offtaker View
  - Retail / End User View
- **Gas**
  - Movement of gas

## Power

# Generator / PPA Offtaker View

- **Key Issues**

- Description of the Product
- Force Majeure
- Liquidated Damages and Replacement Obligations

## Description of the Product

### Issue: Misalignment between PPA and EEI Product Definitions

- Different or more ambiguous description of excuses to performance.
- Different or unclear descriptions of the generation asset or assets where unit contingent obligations are intended.
- Loose PPA language in general that makes it unclear whether the obligation is firm or unit contingent.
- Take-Aways:
  - Precision is key
  - Alignment is key where performance up/down stream is dependent on another deal.
