Real estate agreements in renewable energy development

What is the purpose? Obtaining site control – ensuring the developer has the appropriate legal rights to use the land.

Wind: requires large acreage, typically signing real estate agreements with a multitude of landowners

Solar: usually a smaller footprint, which translates to agreements with fewer landowners

Storage: typically the smallest footprint, making purchase option more attractive

ROAD MAP

What are the major components of a typical long term renewable energy lease that are expected the change for wind vs. solar vs. storage projects?

 CLEAN LAW PC

Selected components of long-term renewable energy real estate agreements

1. What kinds of rights are being granted to the developer?
2. How much will the developer pay for those rights, and under what payment structure?
3. What are the landowner's rights to use the land during the lease term?
4. What are subsurface owner's rights to use the land during the lease term (minerals!)?

 CLEAN LAW PC

Selected components of long-term renewable energy real estate agreements

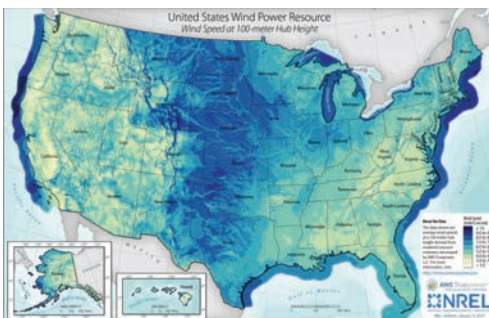

1. **What kinds of rights are being granted to the developer?**
2. How much will the developer pay for those rights, and under what payment structure?
3. What are the landowner's rights to use the land during the lease term?
4. What are subsurface owner's rights to use the land during the lease term (minerals!)?

CLEAN LAW PC

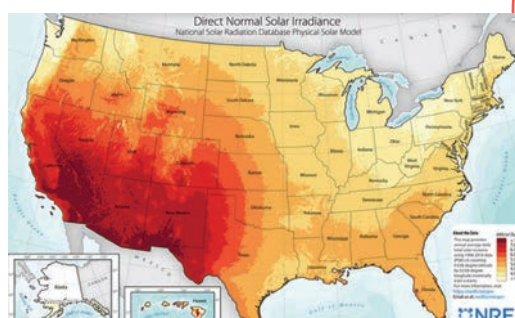

DEVELOPER'S RIGHTS - GENERAL

- Type of agreement – option vs. lease vs. easement, what are the differences?
 - **Option:** grants developer an initial period to determine suitability of property for development.

US Wind Speed (100m hub height)

US Solar Irradiance (kWh/m2/day)
