Cookie Stealing

Cross-Site Scripting (XSS)

- Attacker finds vulnerability in a website
- Attacker injects malicious code into the website or web app so that when the page loads, the code is executed
- When the user logs in, the server authenticates the user and the browser executes the code
- The session key is sent to the attacker who can take over the user's session

Cross-Site Scripting (XSS)

Session Fixation Attack

Packet Sniffing

- Attacker observes the communication between the server and the client
- Attacker intercepts the session cookie when the user authenticates
- Malware also can be designed for packet sniffing and sending the session key to the attacker

Packet Sniffing

Public Wi-Fi Session Sniffing Attack
