# State of The Cyber Market

**RANSOMWARE FREQUENCY IN 2023 IS UP NEARLY 50% COMPARED TO THE CORRESPONDING PERIOD LAST YEAR.**

## Breach Environment

### Distracted threat actors

1H22 saw tapering of US cyberattacks possibly due to Russia concern against Ukrainian targets; trend did not hold into second half of year as threat actors continue to increase ransomware activity in 1H 2023.

### Ransomware resumes

Extortion demands and ransom payments continue to rise while the average downtime continues as well, however the proportion of victims paying a ransom continued to fall (under 40% in 4Q22)

### Attacking Manufacturing

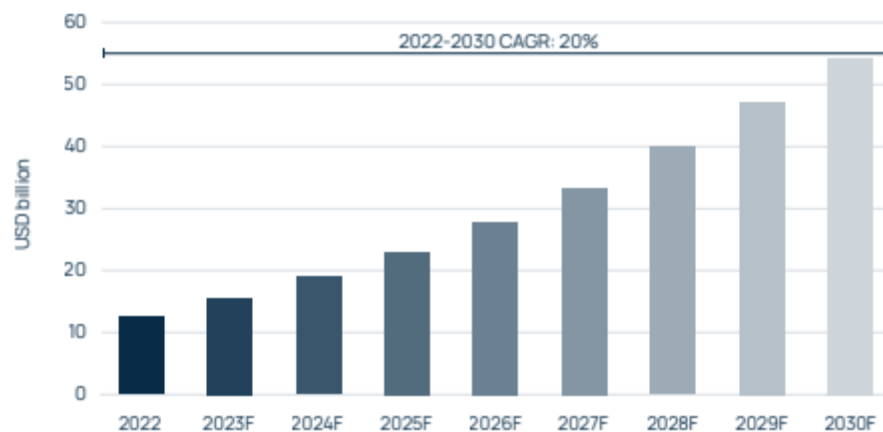

Underscoring that no industry is immune to the threat of ransomware, manufacturing, once considered a low risk industry for cyber attacks, is now the leading industry for ransomware activity

# State of The Cyber Market: 2023

**Figure 21: Gross written premium projections for global cyber insurance market – 2022 to 2030 (Source: Howden)**

## Market Conditions Changing

### Premium Growth

The gross written premium in the Cyber market has ballooned from 2019 to over \$12B in 2022 with expected total premiums to top \$15B. This dramatic growth will continue to outpace the D&O market.

### A Larger Cyber Market

Continued premium growth and new capital investment in the Cyber market has created a larger premium base for Cyber losses going forward.
