Texas Electric and Gas Regulatory Overview:
*A Summary of Public Utility Commission of Texas and Railroad Commission Administrative
and Judicial Decisions for the Year 2020*

I. Introduction

This update summarizes important Texas electric and oil and gas regulatory proceedings at the Public Utility Commission of Texas (PUCT) and the Railroad Commission (RRC) for the year 2020 and highlights key electric and oil and gas decisions by Texas courts for the same period. This overview is not meant to address all regulatory proceedings during the period, but rather emphasizes high profile regulatory proceedings and cases.¹

II. Texas Electric Overview

A. PUCT Pauses Service Cutoffs in Light of COVID-19 Pandemic for Six Months

On March 26, 2020, the Public Utility Commission of Texas (the Commission or PUCT) responded to Texas Governor Greg Abbott's declaration of emergency with a series of actions designed to mitigate the impact of COVID-19 on power, water, and sewer customers in Texas. The PUCT Commissioners voted unanimously to issue orders to temporarily suspend a series of rules pertaining to disconnection of utility service for non-payment. The PUCT orders required Retail Electric Providers (REPs) operating within the Electric Reliability Council of Texas (ERCOT) market to suspend late fees and provide deferred payment plans to residential customers in threat of disconnection. Customers at risk of disconnection because of unemployment due the pandemic were encouraged to reach out to their REPs to request a deferred payment plan. Additionally, the orders prohibited integrated electric utilities outside of the ERCOT market whose rates are set by the PUCT, such as Entergy, El Paso Electric, SPS, and SWEPCO, from charging late fees or disconnecting customers for non-payment during the pandemic. The Commissioners' orders were effective for six months.

The Commissioners also established the COVID-19 Electricity Relief Program, a fund through which REPs could recover a reasonable portion of the cost of providing those uninterrupted services to customers facing financial hardship. The money for this fund was acquired through the proceeds of a 33 cent per megawatt hour charge billed by Transmission and Distribution Utilities (TDUs). This program was designed to help eligible residential customers with electric bills received on or after March 26, 2020. The program ended on September 30, 2020 and reportedly protected over 600,000 households from disconnection. Over \$50 million of bill payment assistance was provided through the program.²

On August 27, 2020, the Commissioners approved a timeline for winding down the Electricity Relief Program, allowing disconnections for non-payment to resume on October 1,

2020. Customers are required to be provided with notice prior to this disconnection of at least ten, but no more than thirty, days in advance.

Additionally, with regard to filings, the PUCT temporarily suspended the obligation to file hard copies of documents and instead only required e-filing. PUCT Staff has been working remotely since March 2020. As of November 2020, these changes were still in place.³

B. Generation CCNs

1. El Paso Electric Company Obtains Unanimous Approval for New Power Station in El Paso County

On November 22, 2019, El Paso Electric Company (EPE) filed an application to amend its Certificate of Convenience and Necessity (CCN) to build, own, and operate an approximately 228-megawatt (MW) natural-gas-fired generating unit, known as the Newman Unit 6. Retail competition has not yet been implemented within EPE's service area and as a result, EPE continues to provide bundled, regulated service to its customers in Texas. EPE's load forecasts indicate that the utility will need additional capacity with daily cycling ability of 50 MW by 2022 and 320 MW by 2023. To meet this need, EPE issued a request for proposals in June 2017. EPE received 81 proposals from 36 companies, which included a combination of solar-power, gas-fired, wind power, and power storage technology sources. EPE's generation project group also submitted two self-build options for the generating unit. Ultimately, EPE selected one of its self-build proposals.

The plan for Newman Unit 6 drew significant opposition from the city and local environmentalists. City officials contend that EPE should hold off on its plan until more is known about how the COVID-19 pandemic will impact its power needs and load forecasts. A one-day hearing on the merits was held in this docket on June 9, 2020. Ultimately, on October 16, 2020, the Administrative Law Judges (ALJs) decided that EPE's load forecasts confirmed the need for Newman Unit 6 and recommended approval of EPE's self-build plan. The estimated overall cost of the construction of Newman Unit 6 is approximately \$158 million. EPE hopes to have the new generator in operation by May 2023.

EPE's proposed project still requires approval from the New Mexico Public Regulation Commission, which is expected to vote on the plan in November 2020. This approval is necessary because EPE also provides retail electric service to customers in the Las Cruces, New Mexico area. Similar to the situation in Texas, the Las Cruces city government, the New Mexico attorney general, and various environmental groups in New Mexico oppose EPE's plan.⁴
