- **Striking the Balance:** Employee Privacy and Effective Cyber-defense
- **Finding that “Just Right”:** Vendor Cybersecurity Due Diligence

Starting the Program:
Mapping Out a Path
Forward

Concept of Cybersecurity

Cybersecurity is about keeping information and systems **safe, available and accurate.**

Cyber awareness needs to be embedded in the corporate culture and your personal use of technology.

Concept of Cybersecurity

Cybersecurity is a business problem. It is not a technical problem. Like any business problem, cybersecurity has legal, policy, behavior, brand/reputation and technical implications and consequences.

The goal of a security program is to identify and manage risk, raise awareness and support beneficial outcomes.

Do you see cybersecurity risk the same way as other business risk?
