students were available "to serve as very cheap
lateral animals." He began by giving them and their
three peers standardized personality tests—an inexpensive, if somewhat crude, method of measuring
differences between the groups. In addition, he used a computer-based test to assess the reaction times of
subjects, who were of different backgrounds.

Subjects who tested
surprised
ity. Compar
to other pe
presented in exactly the opposite way. They were more outgoing, trusting, image-conscious, and rule-
than uninfected women.

Do you want to replace the existing "Normal"?

No

Yes

Results were so bizarre that Flegr initially assumed his data must be flawed. So he tested other groups

**Scientists have found that
one dog year does not
equal 7 human years.**

**In fact, the only thing
that equals 7 human years
is 2020.**
