4

Current Technology

What's the Difference?

- **Artificial Intelligence** is a process of autonomous machine intelligence
- **Machine Learning** is one of the specific scientific methods used in building AI.
- ML enables AI by applying sets of rules on data sets

Artificial Intelligence:

Mimicking the intelligence or behavioural pattern of humans or any other living entity.

Machine Learning:

A technique by which a computer can "learn" from data, without using a complex set of different rules. This approach is mainly based on training a model from datasets.

Deep Learning:

A technique to perform machine learning inspired by our brain's own network of neurons.
